Step #1

Spa Marvel® Cleanser application directions

Spa Marvel® Cleanser is a fast-acting proprietary cleanser that penetrates deep inside your spa's plumbing and equipment, removing organic, mineral and chemical contaminants. In brand new spas, **Spa Marvel® Cleanser** removes residues leftover from the manufacturing process.

- Remove filters.
- Add one bottle of **Spa Marvel® Cleanser** into existing water. Run jets on high for at least 1 hour and then allow to circulate for 23 hours. Drain, flush, clean and thoroughly rinse the tub. Repeat before every drain and refill.
- Do not use the spa during the cleansing process.
- Clean both sides of the spa cover. If the cover is cracked or torn, we recommend it be replaced. The inside of spa covers have been known to harbour mould and bacteria, all of which drip from condensation through the cover back into the spa water.

Step #2

Spa Marvel® Water Treatment application directions

- Replace the filters with new or PROPERLY cleaned filters (using a product such as **Spa Marvel® Filter Cleaner**). Most spa manufacturers recommend replacing cartridge filters annually.
- Refill the spa.
- Add one bottle of **Spa Marvel® Water Treatment** for up to 2000 litres (500 gallons) of spa water and heat to desired temperature. (In a new spa, add one half bottle and the other half in six weeks.)
- Balance alkalinity (80-120) and then pH (7.2-8.2) if necessary.
- Allow spa water to circulate a minimum of 6 hours per day, and even longer if possible.
- Properly clean the filters weekly or as needed using a product such as **Spa Marvel® Filter Cleaner**.
- One bottle of **Spa Marvel®** lasts up to three months. When the water starts to lose its 'silky' feeling, or in three months, add another bottle of **Spa Marvel®** to the spa water.
- We recommend draining and replacing the spa water at least once every year.
- **Spa Marvel® is not a sanitizer. The Spa Marvel Company Inc. recommends that you follow spa water treatment as per local regulatory agency guidelines and use sanitizer as required.**

Tips

- Shower First: Showering will reduce the introduction of dirt, oils, hair products, deodorants, makeup, perfume etc. to the spa.
- Keep the Air On: **Spa Marvel®** works better with air in the water. Leave the air intakes "open" between uses to maximize Spa Marvel's effects. It is better if you can point the jets upwards to increase water agitation when you are not in the spa.
- Clean Your Filters: The **Spa Marvel®** system relies heavily on filtration. Regular and proper cleaning of the spa's filters using a product such as **Spa Marvel® Filter Cleaner** are pivotal to the success of using **Spa Marvel®**.
- Maintain Water Level: Water should be at least 7 ½ centimetres (3 inches) above filter intake. Low water levels will lead to cloudy water.
- Avoid Detergents: Bathing suits and clothing will retain detergent left over from laundering. This detergent will dissolve in the water and create foam. To prevent this, wash bathing attire in water without any detergent to ensure it is free of detergent. Alternatively, don't wear any clothing into the spa.
- Increase Circulation. Too little circulation may lead to water quality issues.
